Customizable Cybersecurity Services

Tailored for the Banking Industry

Banks are relying heavily on IT to support their strategic direction and initiatives; the expertise to maintain availability and security of an evolving technology landscape is paramount, if not mission critical.

Couple the enormous attack surface that must be protected with compliance and regulatory requirements, the task of maintaining an acceptable level of risk is overwhelming.

With an exclusive endorsements from Synergy by Association and the Oregon Bankers Association, IP Services has created a program that enables banks to significantly reduce cybersecurity risk by subscribing to entry level services that allow banks to crawl, then walk, and then run through the process.

Contact IP Services to find out how we can help you with your managed cybersecurity needs!

Security Awareness Training
\$295/mo

Includes baseline testing, automated training campaigns, simulated phishing, vishing, and smishing attacks, reporting for up to 20 users*

Security Information and Event Management (SIEM) \$595/mo

IP SERVICES

Cybersecurity and Managed Services

for Business-Critical Systems and Applications

Industry Thought Leader

IP Services has managed systems and applications for Fortune 500 companies, regional businesses, and local organizations since 1996.

IP Services, in partnership with the **IT Process Institute**, provides ongoing research and development that keeps them at the forefront of cybersecurity and managed services. Based on their study of over 100 organizations, IP Services helped write *The Visible Ops Handbook* about managing IT infrastructure to prevent downtime. The Visible Ops series has sold over 400,000 copies, cementing the IT Process Institute's role as thought leaders advancing the science of IT management.

The IT Process Institute has benchmarked more than 850 IT organizations to understand why high performers excel. Learn more at ITPI.org.

“Creating more trustworthy, secure systems requires a holistic view of the problems, the application of concepts, principles, and best practices of science and engineering to solve those problems”

Dr. Ron Ross – Fellow at the National Institute of Security Standards
